A39800
Calcium-activated potassium channel, composite form -
C:Species: Drosophila melanogaster
C:Date: 27-Mar-1992 #sequence_revision 27-Mar-1992 #te
C:Accession: A39800; PS0444
R:Atkinson, N.S.: Robertson, G.A.: Ganetzky, B.
S:Cience 253, 551-555, 1991
A:Title: A component of calcium-activated potassium ch
A:Reference number: A39800; MUID:91313401
A:Accession: A39800; MUID:91313401
A:Ctestion: A39800; MUID:91313401

CC Slo3, expressed in spermatocytes. Slo3 has, as a monomer, calculated CC molecular weight 120-156 kD; has unit conductance (as a functional CC tetramer, when expressed in xenopus cocytes) of 80-120 pS; has increased CC activity at intracellular pH above about 7.1 and binds specifically to CC polyclonal antibodies against sequences shown in AAY13437, AAY13438, CC AAY13442, and AAY13443. Slo3 is involved in sperm capacitation and/or the CC acrosome reaction, essential steps in fertilization. Slo3, and the CC contraceptives), also for studying sperm physiology in vitro. CC contraceptives), also for studying sperm physiology in vitro. CC slo3-specific antibodies are used for diagnostic detection of Slo3 CC expression. Slo3, as part of a chimera with another channel protein, can be used as a reporter for measuring changes in potassium concentration, CC current flow, ion flux, etc. Fragments of Slo3 nucleic acid are useful as probes for identifying homologs, variants and mutants associated with CC disease; to detect Slo3-related mRNA or protein; for chromosomal CC measure up-regulation of Slo3 in drug screening assays and for production CC of recombinant Slo3 protein. The present sequence represents the amino CC acid sequence of hSlo3-1.

Slo3 is involved in sperm capacitation and/or the CC acrosome reaction, essential steps in fertilization. Slo3, and the CC acrosome reaction, essential steps in fertilization. Slo3, and the CC contraceptives), also for studying sperm physiology in vitro. Slo3-specific antibodies are used to identify specific inhibitors and CC contraceptives), also for studying sperm physiology in vitro. CC slo3-specific antibodies are used for diagnostic detection of Slo3 CC expression. Slo3, as part of a chimera with another channel protein, can be used as a reporter for measuring changes in potassium concentration, CC current flow, ion flux, etc. Fragments of Slo3 nucleic acid are useful as CC probes for identifying homologs, variants and mutants associated with CC disease; to detect Slo3- related mRNA or protein; for chromosomal CC contraction; in gene therapy; for identifying potential modulators; to CC contraction of Slo3 in drug screening assays and for production of recombinant Slo3 protein. The present sequence represents the amino CC acid sequence of hSlo3-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Ma

CC AAY13442, and AAY13443. Slo3 is involved in sperm capacitation and/or the CC acrosome reaction, essential steps in fertilization. Slo3, and the CC nucleic acid encoding 1t, are used to identify specific inhibitors and CC activators (potentially useful for treating infertility and as CC contraceptives), also for studying sperm physiology in vitro. CC Slo3-specific antibodies are used for diagnostic detection of Slo3 CC expression. Slo3, as part of a chimera with another channel protein, can be used as a reporter for measuring changes in potassium concentration, CC current flow, ion flux, etc. Fragments of Slo3 nucleic acid are useful as CC probes for identifying homologs, variants and mutants associated with CC disease; to detect Slo3- related mRNA or protein; for chromosomal CC localization; in gene therapy; for identifying potential modulators; to CC measure up-regulation of Slo3 in drug screening assays and for production of recombinant Slo3 protein. The present sequence represents a mouse Slo3 CC (mSlo3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
The present sequence represents a mouse cation channel protein (CCP). The invention provides an assay for screening potential drugs or agents which interact with CCPs using probaryotic CCPs (such as those given in AAY32009-12) mutated, using recombinant DNA technology, to minic the physiological function and chemical properties of a functional eukaryotic CCP (such as those given in AAY32013-22). An example of a mutated prokaryotic CCP is given in AAY32013-22). An example of the mutated prokaryotic CCP is given in AAY32014. The crystal region of the CCP may also be used in the assay. The drugs or agents obtained can be used to treat conditions related to the function of CCP in vivo, such as cardiac
                                                                                                                                                                                                                                                                                                                                                                                                                             Key
